

## First project year of the NRP79 project successfully completed

March 12, 2024 | Kristin Schirmer

**As we pass the first-year-mark of our NRP79 project, “Expanding the fish invitrome towards a modular, socio-technical framework for animal-free prediction of chemical toxicity to fish”, we can report that we are making large strides and moving along well.**

We just had a very successful review meeting with the advisory panel, completed our team with Marion Revel joining, and were able to meet in person also with our colleague Jarno Hoekman, who came all the way from Utrecht to visit us. We are grateful to have this research opportunity and this wonderful team.
